## 1. Introductions

This tracking device is based on GSM/GPRS network and GPS Satellite positioning system, which is widely applied for tracking of car, motorcycle, E-bike and other vehicles due to design of mini size, waterproof and wide voltage input 8-80V. It's one of your best choice on vehicle tracking with its practical functions and competitive price.

## 2. Appearance

## 3. Key Features

- Stable & Practical Functions
- Quad Band GSM, Enable to Work Worldwide
- U-Blox GPS Chip, 56 Channels, Accuracy:10m
- ACC detecting, Remote Engine cut, Geo-fence
- Alarm: Towing alarm, Over-speed alarm, External power cut alert, Geo-fence alert
- Different reporting interval basing on Acc on/off, Daily report per 24 hours to your mobile phone
- 12-80V wide voltage input, backup battery available
- Sleep mode, SMS & Web tracking available
- Map Link Available on SMS Query
- Weather-Proof IP65 design
- Mini design with size: 88x51x19mm (LxWxH)

## 4. Specifications

Storage Temperature	-40 to 90 °C
Operating Environment	Temperature: -20 to 60 °C, Humidity:<95%
GPS Module	U-BLOX UBX-G7020, 56 channels

GPS/GSM Antenna	Built-in
GPRS	MTK MT6260 Quad band:850/900/1800/1900 MHz, GPRS Class 12
Sensitivity	Tracking: –159 dBm Cold starts: –144 dBm Hot starts: –156 dBm Cold start: <38s Warm Start: <4s Hot Start: 1s
A-GPS/LBS	Assist Now Online and Assist Now Offline services, OMA SUPL compliant GPRS
Power Supply	12-80VDC, Backup Rechargeable 140mAh Li-Polymer Battery
Motion Sensor	Built-in
Case	ABS plastic, Fire-proof
Measurement	88x51x19mm (LxWxH)
Weight	100g

## 5. How to use

### 5.1 Preparation before installation

- a) check if all the components are ready (main unit, Velcro, relay-optional). b) Prepare a 2G GSM SIM card, 3G or 4G is ok as long as it can support 2G GSM network, make sure the GPRS is available.
- c) Open the case of the tracker, and insert the SIM card following the printing on the case.

### 5.2 Installation Guide

- a) Wiring Definition
  - Red:** Positive + (8-80V)
  - Black:** Ground
  - Orange:** ACC detecting
  - Yellow:** cut off output

b) Where to install

Hide the device under the dashboard (or somewhere you prefer), Make sure the face with printing up to sky and no metal covering above the case of the tracker.

Fix the device with Velcro

Keep the wires connected to the vehicle

c) LED Indicator

There are two LED indicator (Blue & Yellow)near the SIM card slot

Blue LED	Blinking	Searching the GPS signal
	On	GPS signal is ok
Yellow LED	Blinking	Searching the GSM network
	On	GPRS is connected

**Note:** we suggest the user do a bench test to make sure the device can work normally before installation.

## 6. Setting & Query Commands

Note: the default password is "0000"

### 6.1 Set User Number

Command: `XXXXXXXXXXXX0000space1`

<code>XXXXXXXXXXXX 0000</code>	Master mobile phone number
<code>space 1</code>	Default password
e.g.	Space between password and master serial
To device <code>07123456780000 1</code>	The master serial, value:1-3

Back to mobile phone SET OK

Note: All the alerts will be sent to user number once it's set, but other mobile phone can send commands to configure or query as long as the password is correct.

D101# (cancel the first user number)

D102#	(cancel the second user number)
D103#	(cancel the third user number)

## 6.2 Set the working mode

SMS mode (default), command: 7000000

GPRS mode, command: 7100000

700	Command code for SMS mode
710	Command code for GPRS mode
0000	Password
<p>Two working mode available basing on GPRS and SMS.</p> <p>If the user only wants to check the vehicle position &amp; map link or to disable the engine remote with mobile phone, the SMS working mode is suitable.</p> <p>You can choose GPRS working mode if you want to monitor the vehicle in real time and to check the history trace etc.</p> <p>So you need to send command "7100000" to activate GPRS mode if you prefer GPRS when the first time to use this device</p>	

## 6.3 Set APN

Command1: 8030000spaceapn name

Command2: 8030000spaceapn namespaceapn user namespaceapn password

Note: Command2 is needed when there is user name and password for the APN of the SIM card

803	Command code
0000	Password
space	Space between the parameter
apn name	The APN name for SIM card inside the tracker
apn user name	The use name for the APN
apn password	The password for the APN
<p>e.g.</p> <p>To device</p> <p>8030000 cmnet</p> <p>Back to mobile phone</p> <p>SET OK</p>	

## 6.4 Change password

Command: 77712340000

777	Command code
1234	New password
0000	Default password
<p>e.g.</p> <p>To device</p>	

77712340000  
 Back to mobile phone  
 SET OK  
 Note: the new password should be 4 digits

## 6.5 Change IP and Port

Command: 8040000spaceip addressspaceport

804	Command code
0000	Password
space	Space between parameter
ip address	New IP address, put your IP address
port	New Port, put your port
e.g. To device 8040000 107.173.28.18 7979 to mobile phone SET OK	

## 6.6 Change Time Zone

Command: 8960000DNN

896	Command code
0000	Password
D	Time zone type: =E or W E=East time, W=West time
NN	Parameter for time zone (1-12), Greenwich mean time
e.g. To device 8960000E08 Back to mobile SET OK	

## 6.7 Set reporting interval

ACC ON interval: 8050000spaceX

ACC OFF interval: 8090000spaceX

805	Command code to set interval when ACC ON
809	Command code to set interval when ACC OFF
0000	Password
space	There is a space between password and time
X	Interval parameter, X=(10- 18000), unit: second,
e.g. To device 8050000 20	

Back to mobile phone  
 SET OK  
 To device  
 8090000 600  
 Back to mobile phone  
 SET OK

## 6.8 Set Sleep Model

Sleep0000spaceX

sleep	Command code to set sleep mode
0000	Password
space	There is a space between password and mode no.
X	Time, X=(0~720, unit: minute), 0 mean disable sleep mode, 1 means activate sleep mode

e.g.  
 To device  
 Sleep0000 0  
 Back to mobile phone  
 SET OK  
 To device  
 Sleep0000 1  
 Back to mobile phone  
 SET OK  
**Note:** The device will go to sleep mode if it does not receive any commands within the setting time The GPS/GSM module will be off and enter power saving mode, any shock or commands or calling to the device can awake it.

## 6.9 Longitude and Latitude query

Command: 6660000

666	Command code
0000	Password

e.g.  
 To device  
 6660000  
 Back to mobile phone  
 La:+22 37.4187  
 Lo:+114 03.2950  
 Date:2015-05-30 16:12:58  
 ID:8813000690  
 STATE: ACC OFF  
 FIX:V  
 Bat:6

## 6.10 Google map link query

Command: 6690000

669	Command code
0000	Password
<p>e.g.            To device                6690000            Back to mobile phone  <a href="http://maps.google.com/maps?q=22.62386%2c114.05445">http://maps.google.com/maps?q=22.62386%2c114.05445</a>            A,2015-05-15 14:27:13</p>	

## 6.11 Daily report to mobile phone

Command: 6650000HHMM

Turn off daily report command: 6650000OFF

665	Command code
0000	Password
HHMM	Fix time per day, HH=(hour:0-23), MM=(minute:0-59)
<p>e.g.            To device                66500001550            Back to mobile phone  <a href="http://maps.google.com/maps?q=22.62378%2c114.05449">http://maps.google.com/maps?q=22.62378%2c114.05449</a>            Date:2015-05-15 15:50:00            ID:8813000697            STATE:Daily ACC OFF            FIX:A            Bat:6            This report can be sent to your mobile phone (user number) at 15:50 every day.            To device                6650000OFF            Back to mobile phone            SET DAILY REPORT OFF</p>	

## 6.12 Remote engine cut (optional)

Engine cut: 9400000

Engine recovery: 9410000

940	Command code to cut engine
941	Command code to recover engine
0000	Password
<p>e.g.            To device                9400000</p>	

9410000  
 Back to mobile phone  
 SET OK

### 6.13 Set External Power Cut Alert

ON command: 0110000

OFF command: 0100000

011	Command code to activate the alert
010	Command code to disable the alert
0000	Password
e.g. To device 0110000 0100000 Back to mobile phone POWER ALARM ON POWER ALARM OFF When activate the power cut alert, all user number will get alert once external power is cut, but only the first user number can get calling alert	

### 6.14 Set Geo-fence

Activate Geo-fence: 2110000

Disable Geo-fence: 2100000

Set the radius: 0050000space1000

211	Command code to activate Geo-fence
210	Command code to disable Geo-fence
005	Command code to set the radius
0000	Password
space	There is a space between password and radius
1000	Parameter for radius, unit: meter
e.g. To device 2110000 2100000 Back to mobile phone SET OK Note: The shock alarm (6.16) must be activated in the meantime, when send command "211".	

### 6.15 Set Over-speed Alert

Command: 1220000spaceX

122	Command code to activate the alert
0000	Password

space	There is a space between password and speed
X	Over-speed threshold, integer, unit: KM/H X=(0-999), 0=alert off
<p>e.g. To device 1220000 120 Back to mobile phone SET OK When activate the over-speed alert, the user number will get alert once speed is over 120km/h.</p>	

## 6.16 Shock Alarm

ON Command: 1810000TX

OFF Command: 1800000

181	Command code to enable Tow Alarm
180	Command code to disable Tow Alarm
0000	Password
TX	T is separator, X is the consecutive shocking time, X=(0~120) unit: second
<p>e.g. To device 1800000 Back to mobile phone SET OK To device 1810000T09 Back to mobile phone SET OK Note: Tow alarm will be sent to user when ACC is off and the consecutive shock reach 9 seconds , the alarm message as below: <a href="http://maps.google.com/maps?q=22.62425%2c114.05454">http://maps.google.com/maps?q=22.62425%2c114.05454</a> Date:2015-05-15 17:24:58 ID:8813000697 STATE:Tow Alarm ACC OFF FIX:A Bat:6</p>	

## 6.17 Auxiliary commands

Reset the device	Send <i>RESET</i> by SMS
Read configuration	Send <i>RCONF</i> by SMS
